Jordan Nash
Software Developer

I am a professional, object orientated, C# software developer with 3 years experience. Graduated with a Diploma of Software Development in 2016 and have actively been creating various projects on GitHub including Pitcher. Pitcher is a web bug tracker created with agile sprints, an SRS and a third-party login service to reduce development workload. I am using the app currently to log my own errors. Please check portfolio for project demo image. Passionate about software development. Looking to join a development team in Brisbane.
